SO$_3$ MONITOR

Continuous SO$_3$ Measurement

Online Monitoring
Sulphur trioxide (SO₃) is formed as a by-product during the combustion of fossil fuels for power generation and is also used or produced in many industrial processes. At temperatures below about 200 °C, it combines with water vapor to form sulfuric acid which has deleterious effects on plant surfaces and on the environment.

In power generation, SO₃ measurements provide data to allow the operator to burn fuel in the most efficient way to minimise corrosion of the plant and limit acid discharges to the environment. Monitoring of SO₃ is also important where it is formed as a by-product, e.g. in DeNOx systems.

The Pentol SO₃ monitor has been designed to meet a wide range of measuring requirements. The instrument is portable and suitable for continuous- and short-term measurements. The unit is auto-calibrating in a user defined cycle, which can be adjusted directly on the screen. In addition to the analogue 4 ... 20 mA output, the SO₃ monitor is equipped with an electronic data logger to record the measurements. Data can be recorded up to one year and exported to Excel for further processing.
OPERATING PRINCIPLE

The SO₃ or H₂SO₄ in the gas sample is absorbed as sulphate ions (SO₄²⁻) in an aqueous solution of propan-2-ol in water. The solution is passed through a bed of barium chloranilate. The acid chloranilate ions created are measured in a continuous flow photometer. By maintaining a constant ratio of flow rates for the gas and the propan-2-ol absorbing solution, the concentration of acid chloranilate ions can be directly related to the sulphate ion concentration in the absorbing solution, and hence the SO₃ concentration in the gas.

Above acid dew point temperature > 130 °C

TECHNICAL SPECIFICATION

Ranges 1 - 12.5 | 1 - 25 | 1 - 50 | 1 - 100 ppm
1 - 200 ppm (after changing instruments ppm-speed)

Accuracy +/- 5 % of reading (in calibrated range)

Lag time approx. 5 min.

Response (90% FSD) approx. 10 min.
(depending on umbilical length) max. 5 m

Solution consumption (propan-2-ol) max. 1 ml/min

Calibration solution (= 30 ml/calibration)

Ambient temperature 0 - 55 °C

Operating temp. 30 °C by installed cooling unit

IP ingress protection IP54

Module dimensions
Analysis Module 19” unit, (l/w/h = 60/55/55 cm, w=50 kg)
Control Module 19” unit, (l/w/h = 60/55/25 cm, w=20 kg)

Power Requirement 230 V 50/60 Hz or 110 V 50/60 Hz, 350 W

Signal Output 4 ... 20 mA output for external recorder (Data logger included with the capacity of 1 year collection of data)

Probe Length 0.5 m, 1 m, 1.2 m, 1.5 m, 2 m (standard 1.5 m)

Filter for probe for coal fired power plant or plants with high dust emission. Automatic purge system integrated (adjustable on screen)

Maximum temperature Flue gas temperature up to 400°C (up to 550°C with special probes)

German standard VDI 2462

Measuring SO₃ is one thing. Pentol offers complementing products to reduce SO₃ emissions and to neutralise any condensing SO₃.
